

DESITE BIM 3.0.6

October, 5th 2022

Release Notes

IMPROVEMENTS & BUG FIXING:

- **API**
 - The function `_getConnectedTriangles()` could cause a stack overflow if too large triangle meshes were processed.
- **Import**
 - If an IFC file contains multiple `IfcSite` objects, the proposed values for model transformation during the import will be taken from the `IfcSite` that has a `IfcLocalPlacement` that is not zero.
- **Miscellaneous**
 - If a viewpoint has a material scheme applied, the legend for this schema was not visible in DESITE Share and Share Pro. Also the option to reset the displayed materials to the default state was added.
