DESITE BIM 3.0.7

December, 14th 2022

Release Notes

IMPROVEMENTS & BUG FIXING:

- **Import**

  - Image quality of Orthoimages was worse, because the alpha channel was interpreted as transparency in .tif/.tiff files. This has been fixed.

- **Export**

  - Improved handling of geometry (tessellation) in the IFC export.

- **API**

  - An optional parameter "waitForCompletion" was (re-)introduced for the API function "snychronizeDocumentContainer()" to allow blocking script execution while the synchronization is in progress.

  - Paths used in API functions can now include environment variables, e.g. "%userprofile%\documents".

  - The API function removeAllLinkedObjects() will now do a reverse lookup, which means it can be called with IDs from domain geometry and links from other domains will be removed.
