DESITE BIM 3.0.10

April, 20th 2023

Release Notes

IMPROVEMENTS & BUG FIXING:

- **Imports**

    - #1878 - The default import parameters for IFC files are now aligned for imports via Drag & Drop and the option in the Application menu. Also the import option "Advanced Consistency Check" causes an issue in some cases that geometry objects were not imported with a closed shell. This has been fixed.

    - #1918 - In some cases geometry object with small size were not imported correctly (missing triangles). This is fixed with an update to the latest version of IFC Engine.

- **Bill of Quantity**

    - #1838 - If a "BOQ.XML" file is loaded twice into the BoQ domain, two models were correctly created, but after saving the project and re-opening, only one of the models remains. This has been fixed.

- **Activities**

    - #1946 – Drag & Drop behaviour to copy items (Ctrl + Drag & Drop) in the Activities domain tree view is now aligned with other domain tree views.

- **Documents**

    - #1943 - In some cases DESITE crashed while using Shift + Drag & Drop one document onto another. This has been fixed.

- **Miscellaneous**

    - #1945 - DESITE crashed if user tries to copy domain item using Ctrl + Drag & Drop in between two models in domain widgets. This has been fixed.
